I set the reactivity to 5% and it seems indeed that the effect of the inertia is more realistic and natrual, closer to real life. However i am interested to learn more about this setting, i still have my pitch at 40% as i have a joystick with a limited range and although the aircrafts are less twitchy the controll deflection still feels a bit aggressive but im trying out new settings.

Because of inertia, the sensory areas of the inner ear cannot detect slight changes in the attitude of the airplane, nor can they accurately sense attitude changes that occur at a uniform rate over a period of time. On the other hand, false sensations are often generated; leading the pilot to believe the attitude of the airplane has changed ...

But even simple autopilot inputs can end in outlandishly spectacular flight maneuvers. Moreover, the physical motion behavior of a 70-ton object like the A320neo is rather questionable. The large mass moments of inertia (around all three flight axes) ensure a high inertia during control inputs in purely physical terms.
