Theorem VFSL Vector Form of Solutions to Linear Systems. Note that both halves of the proof of Theorem VFSL indicate that $\alpha_i = [x]_i$. In other words, the arbitrary scalars, α_i , in the description of the set S actually have more meaning — they are the values of the free variables $[x]_i$, $1 \leq i \leq n-r$.

Linear independence is a property of a set of vectors. It is easy to take a set of vectors, and an equal number of scalars, all zero, and form a linear combination that equals the zero vector. When the easy way is the only way, then we say the set is linearly independent. Here are a couple of examples.
