See our guide for more information about aerial photographs.

### **Aerial photography - Wikipedia**

Aerial photographs convey only a weak impression of relief unless a stereoscope is used to produce a three-dimensional image. The three-dimensional impression which is obtained in normal vision is due to the fact that with two eyes set about 6 cms apart, each eye is able to present to the brain a slightly different perspective of the object that is being observed.

### **Colorado Aerial Photos**

Aerial photography (or airborne imagery) is the taking of photographs from an aircraft or other flying object. Platforms for aerial photography include fixed-wing aircraft, helicopters, unmanned aerial vehicles (UAVs or "drones"), balloons, blimps and dirigibles, rockets, pigeons, kites, parachutes, stand-alone telescoping and vehicle-mounted poles..
