Funded with a billion dollars, the company's goal is to study the biology of aging and develop life-extending drugs. Then in 2014, Craig Venter, famous for his work sequencing the human genome, established Human Longevity, Inc., a company whose goal is to amass a huge database of human genome sequences for use in life-extension research.

Additional support for the idea that human aging shares features with aging in other species comes from direct studies of DNA polymorphisms associated with longevity in people. The best example of this is the Foxo3a gene, which encodes a transcription factor that modulates a variety of cellular processes, including cell death, growth, and
