FAA-H-8083-1A, Aircraft Weight & Balance Handbook

FACTORS AFFECTING MASS AND BALANCE IN AIRCRAFT • THRUST AND DRAG: The forces are arranged so that lift acts behind weight and thrust acts below drag. Ideally, the pitching moments should cancel each other out, but in practice, a secondary method of balancing is used. It is normally done by the tailplane. 7

Boeing 737 Limitations

To get a better idea of whether this was possible I looked at the weight and balance for a 737. The Airplane Characteristics document provides the necessary information to estimate how the center of gravity (CG) may shift due to passengers deplaning.. The information in the document shows between 89% and 96% of the weight on the main landing gear when the aircraft is within the proper CG range ...

The center of gravity (CG) of an aircraft is the point over which the aircraft would balance. Its position is calculated after supporting the aircraft on at least two sets of weighing scales or load cells and noting the weight shown on each set of scales or load cells. The center of gravity affects the stability of the aircraft. To ensure the aircraft is safe to fly, the center of gravity must ...

737-500 Weight and Balance manual ?? - PPRuNe Forums

The last part of the answer: The W&B manual for the airplane includes tables for non-standard conditions. So if a "standard" weight of 180 lbs. is being used in scheduled service, and we seat 120 passengers in coach, that would be a maximum weight for coach of 21600 pounds, or perhaps a weight-index of 21625 meaning that it adds 2.5 trim units.
