Chance, development, and aging, Experimental Gerontology ...

The aging process more closely reflects chance events that affect biological systems during development or during the early reproductively-active years . The genetic determinism model by which young (normal, control) are compared to old (abnormal, experimental) groups will not be effective in identifying mechanisms by which nutritional factors affect aging.

Chance, Development, and Aging by Caleb E. ... - DeepDyve

The past several decades have witnessed unidimensional decline models of aging give way to life-span developmental models that consider how specific processes and strategies facilitate adaptive aging. In part, this shift was provoked by the stark contrast between findings that clearly demonstrate ...
