These solutions provide appropriate answers to the textbook questions.

Chapter 14 - Article 27A

5.1 Estimating probabilities. In order to run simulations with random variables, we use R's built in random generation functions. These functions all take the form `rdistname`, where `distname` is the root name of the distribution. Normal random variables have root `norm`, so the random generation function for normal rvs is `rnorm`. Other root names we have encountered so far are `unif`, `geom`, `pois`
