We would like to have a robust generalization of classical algebra which includes a good theory of modules, constructions like localization and completion, and so forth. The homotopy category H is too poorly behaved to support such a theory. An alternate possibility is to work with commutative ring objects in the category of topological

Linear Algebra As an Introduction to Abstract Mathematics

For over twenty years, the author's classic three-volume set, *Algebra*, has been regarded by many as the most outstanding introductory work available. This work, *Classic Algebra*, combines a fully updated Volume 1 with the
