Climate Change

human activities, such as the burning of fossil fuels and deforestation. Climate change refers to a statistically significant variation in either the mean state of the climate or in its variability, persisting for an extended period (typically decades or longer).

Difference between climate change and climate variability?

Acces PDF

Climate Variability

Climate Change

Climate Variability and Change Climate is the sum of weather over time, the average temperatures and rainfall of a place.

Earth's climate—how hot our planet is on average—is set by the Sun. Anything that changes the amount of solar energy that enters the Earth system will change the temperature.
