and using these congruent relationships to prove properties of parallel lines, triangles, and other polygons. Throughout the unit, students make conjectures from a set of examples and nonexamples, and justify or refine these claims by reasoning inductively using the tools studied in unit one, which include constructions and transformations.

Geometry - Edgenuity Inc.

If two angles and the included side of one triangle are congruent to the corresponding included angle and side of another triangle, the triangles are congruent. This is the Angle-Side-Angle (ASA) Postulate.

The angle between two sides of a triangle is called the included angle.

Side-Side-Side Postulate: If the three sides of one triangle are congruent to the three sides of another triangle, the triangles are congruent.

If 3 segments of 1 triangle are congruent to the corresponding segments of another triangle, the triangles are congruent. This is the Side-Side-Side (SSS) Postulate.

When 2 sides are congruent and there is an included angle, the triangles are congruent. This is the Side-Angle-Side (SAS) Postulate.
