Dermoscopy Of The Hair And Nails

Hair and scalp dermoscopy, also known as trichoscopy, is a useful, noninvasive, adjunctive tool for the diagnosis of alopecia and other scalp and hair disorders. The utility of dermoscopy resides in improved visualization of abnormalities of follicular ostia, perifollicular skin, cutaneous blood vessels, and hair shafts.

Trichoscopy is a method of hair and scalp evaluation and is used for diagnosing hair and scalp diseases. The method is based on dermoscopy. In trichoscopy hair and scalp structures may be visualized at many-fold magnification. Currently magnifications ranging from 10-fold to 70-fold are most popular in
