Evaluation. Measurements and feedback determine whether adjustments to the initial design are needed, and results are reviewed with the client. Students are contacted and instructors, designers, developers and anyone involved with the program meet for a "lessons learned" review. The model then begins again.

This work has presented the design, modeling, and evaluation of heat extraction based on a set of doublet well layout schemes in a conceptual enhanced geothermal system. A hydrothermal model that fully couples the fluid flow and heat transport has been used to model the water circulation and heat extraction process in fractured reservoirs.

Evaluation Design. To evaluate the effect that a program has on participants' health outcomes, behaviors, and knowledge, there are three different potential designs : Experimental design: Used to determine if a program or intervention is more effective than the current process. Involves randomly assigning participants to a treatment or control group.

Once that's complete, design the program needed for that learning to happen. Your evaluation metrics should follow that same chain so that if you don't meet the business goal, you'll know where it went wrong. 2. Kaufman's Model Of Learning Evaluation. Several models build on or react to Kirkpatrick's. Kaufman's model of learning evaluation is one of those.

ADDIE Model. Evaluation During the evaluation phase of the ADDIE Model, the instructional designer determines what success will look like and how it will be measured. Often times, the evaluation consists of two phases: formative and summative. Formative evaluation is iterative and is done throughout the design and development processes.
