Diesel Fuel. Diesel fuels are a mixture of mostly C10 through C19 hydrocarbons. They include about 64 percent aliphatic hydrocarbons, 1 to 2 percent olefinic hydrocarbons and 35 percent aromatic hydrocarbons.

## **Understanding Diesel Fuels - dummies**

Diesel fuel, also called diesel oil, combustible liquid used as fuel for diesel engines, ordinarily obtained from fractions of crude oil that are less volatile than the fractions used in gasoline. In diesel engines the fuel is ignited not by a spark, as in gasoline engines, but by the heat of air compressed in the cylinder, with the fuel injected in a spray into the hot compressed air.

## **Diesel Fuel Vs. Home Heating Oil | Sciencing**

Diesel fuel evaporates more slowly because it is heavier. It contains more carbon atoms in longer chains than gasoline does (gasoline is typically C<sub>9</sub>H<sub>20</sub>, while diesel fuel is typically C<sub>14</sub>H<sub>30</sub>). It takes less refining to create diesel fuel, which is why it used to be cheaper than gasoline. Since 2004, however, demand for diesel has risen for several reasons, including increased ...
