Dispelling organic peroxides' myths and legends. - Free

...

Assessing the detrimental health effects of chemicals requires the extrapolation of experimental data in animals to human populations. This is achieved by applying a default uncertainty factor of 100 to doses not found to be associated with observable effects in laboratory animals. It is commonly assumed that the toxicokinetic and toxicodynamic sub-components of this default uncertainty factor ...

...

Of course the chemical industry isn't perfect, and yes, there will occasionally be mis-steps or mistakes – as in any profession or regulatory body. However, to imply that these bodies are complicit with systematically poisoning the population is a simply incorrect view. Finally, everything is evolving. You are. Plants are.

...

Biocatalysis has emerged as an important tool in the industrial synthesis of bulk chemicals, pharmaceutical and agrochemical intermediates, active pharmaceuticals, and food ingredients. However, the number and diversity of the applications are modest, perhaps in part because of perceived or real limitations of biocatalysts, such as limited enzyme availability, substrate scope, and operational stability.
