as the main technology to create pages, as it was already a standard in the web community. The idea was to simplify the adoption of JavaServer Faces by using a familiar tag language that already had a large adoption rate within the Java community.

JavaServer® Faces 2.0: Essential Guide for Developers [Book]

Annotating an application-scope bean as Singleton is redundant. By definition, there's only one instance of it per application. The problem here is that although your property is only coded once and for a single user, its get method has side-effects.

In computing, Facelets is an open-source Web template system under the Apache license and the default view handler technology for JavaServer Faces. The language requires valid input XML documents to work. Facelets supports all of the JSF UI components and focuses completely on building the JSF component tree, reflecting the view for a JSF application. Although both JSP and JSF technologies have been improved to work better together, Facelets eliminates the issues noted in Hans Bergsten's article
