human evolution | Stages & Timeline | Britannica

Human evolution from its first separation from the last common ancestor of humans and chimpanzees is characterized by a number of morphological, developmental, physiological, and behavioral changes. The most significant of these adaptations are bipedalism, increased brain size, lengthened ontogeny (gestation and infancy), and decreased sexual dimorphism.

The Usborne little encyclopedia of the human body ...

Human evolution, the process by which human beings developed on Earth from now-extinct primates. Viewed zoologically, we humans are *Homo sapiens*, a culture-bearing upright-walking species that lives on the ground and very likely first evolved in Africa about 315,000 years ago. We are now the only living members of what many zoologists refer to as the human tribe, *Hominini*, but there is abundant ...
