Metallic Flexible Couplings. Metallic flexible couplings join two shafts together to transmit mechanical power. Their flexibility allows independent motion of the two shafts and compensates for shaft misalignment, while their metal construction allows couplings to withstand high temperatures and maintain correct alignment.

Disc Coupling Center Assemblies Disc coupling center assemblies separate and position sets of disc packs, which form disc couplings. They attach to disc coupling hubs, which form the ends of the coupling, to create a complete coupling assembly that is torsionally stable yet flexible enough to compensate for shaft misalignment.

Shaft Couplings, Collars & U-joints. Shaft couplings, collars, and U-joints join components and shafts together to transmit mechanical power. Shaft couplings join two shafts together to transmit rotary motion from one shaft to the other. They include elastomeric flexible couplings and fluid couplings.

Tire coupling hubs support tire couplings, which are flexible shaft couplings that join shafts and transmit torque between two shafts. Tire couplings have a flexible center element called a tire that allows shaft displacement and some movement. Tire coupling hubs hold the tire and fasten the coupling to a drive shaft or driven shaft.

The Kop-Flex® products continue to innovate the industry with leading solutions such as the evolutionary High Performance Disc 2.0 coupling, torque monitoring systems, and patented ground bearing technology. The strength of the brand lies in its ability to provide a wide range of critical applications; from high speed, High Performance couplings for the Oil and Gas Industry, to high torque ...

Tire Shaft Couplings - Motion Industries
A beam coupling, also known as helical coupling, is a flexible coupling for transmitting torque between two shafts while allowing for angular misalignment, parallel offset and even axial motion, of one shaft relative to the other. This design utilizes a single piece of material and becomes flexible by removal of material along a spiral path resulting in a curved flexible beam of helical shape.
