Flood Estimation Handbook This two day course will give you hands-on use of the Flood Estimation Handbook (FEH) methods. It covers all the latest guidance and findings from research including the ReFH2 method, FEH13 design rainfalls, small catchments research and FEH Local guidance.

An Introduction to the Flood

Online Library Flood Estimation Handbook

Estimation Handbook

The Flood Estimation Handbook was published in 1999 in the form of a five-volume handbook providing practical guidance on the use of flood estimation methods, together with details of supporting theory and analysis. The handbook was accompanied by software and digital data, allowing users to estimate flood frequency for any site of interest on the UK river network, whether gauged or ungauged.
