Fluid friction is characterized by viscosity which is a measure of the magnitude of tangential frictional forces in flows with velocity gradients. Viscous forces are important in many flows, but least important in flow past "streamlined" bodies. We shall be concerned mainly with inviscid flows where friction is not important, but it

In physics and engineering, fluid dynamics is a subdiscipline of fluid mechanics that describes the flow of fluids—liquids and gases.It has several subdisciplines, including aerodynamics (the study of air and other gases in motion) and hydrodynamics (the study of liquids in motion). Fluid dynamics has a wide range of applications, including calculating forces and moments on aircraft ...
