How do I manage paresthesia caused by a needle injury ...

Toxic dose limits (mg.kg⁻¹) for local anaesthetics based on body weight are well-established, but calculation of the maximum safe volume (ml) of a given agent and formulation is complex, and frequently results in errors. We therefore developed a nomogram to perform this calculation. We compared the performance of the nomogram with a spreadsheet and a general purpose calculator using ...

Carbocaine - Clinical Pharmacology. Carbocaine stabilizes the neuronal membrane and prevents the initiation and transmission of nerve impulses, thereby effecting local anesthesia.

Local anesthesia options during dental hygiene care ...

A local anesthetic (LA) is a medication that causes absence of pain sensation. When it is used on specific nerve pathways (local anesthetic nerve block), paralysis (loss of muscle power) also can be achieved. Clinical LAs belong to one of two classes: aminoamide and aminoester local anesthetics. Synthetic LAs are structurally related to cocaine. They differ from cocaine mainly in that they have ...

Before choosing pharmacologic adjuncts for patient management, the dentist should carefully review the patient's medical history. In this context, the American Society of Anesthesiologists (ASA) Physical Status Classification System can be helpful (Table 38-1). This assessment tool can be used to estimate the patient's overall ability to tolerate the stress of a planned procedure.
