Hyperandrogenism affects 5-10% of females of reproductive age. Hyperandrogenism can affect both males and females, but is more noticeable in females since elevated levels of androgens in females often facilitates virilization. Because hyperandrogenism is characterized by the elevation of male sex hormone levels, symptoms of hyperandrogenism in men are often negligible.

Many women with excess male hormones have problems with irregular periods, acne, oily skin and excess hair growth. A common cause of hyperandrogenism is Polycystic Ovary Syndrome (PCOS) where the ovaries produce excesses of male hormone and do not ovulate regularly. This condition is also a common cause of infertility.

### **Infertility And Reproductive Medicine Hyperandrogenism**

The use of tissue-specific KO animals allowed us to unravel the relative contribution of individual reproductive tissues to one feature of PCOS, hyperandrogenism. We demonstrate that insulin signaling in the TI cells contributes to obesity-associated infertility and hyperandrogenemia by augmenting CYP17 expression and activity.
