Amazon.com: Customer reviews: Inventory Trading: How I Run ...
The stock turn formula is: Cost of Goods Sold / Average Inventory . Let's say an apparel store's average inventory is \$25,000 and the cost of goods it sold in a 12-month period is \$100,000. Its inventory turnover is 4.0, and this means that the store sold out of its inventory four times that year.

Inventory controls — AccountingTools
Inventory management is the process of efficiently monitoring the flow of products into and out of an existing inventory in the warehouse. This process involves controlling the receipt of products to prevent the inventory from becoming too high where items are stored at an unnecessary cost, or too low where it can cause a stock-out and production could be halted due to lack of raw materials.
