It's easy to search Wikibooks by topic, and there are separate sections for recipes and childrens' textbooks. You can download any page as a PDF using a link provided in the left-hand menu, but unfortunately there's no support for other formats. There's also Collection Creator - a handy tool that lets you collate several pages, organize them, and export them together (again, in PDF format). It's a nice feature that enables you to customize your reading material, but it's a bit of a hassle, and is really designed for readers who want printouts. The easiest way to read Wikibooks is simply to open them in your web browser.

Keynote uses the value(s) in the referenced cells to calculate the result of the formula. For example, if you include "A1" in a formula, it refers to the value in cell A1 (the cell in Column A and Row 1.) The examples below show the use of cell references in formulas.

Keynote - Official Apple Support

We begin using Keynote by either opening an existing file or creating a new file: To open an existing file, we navigate the "Open" dialog box to the file we want to open, then double-click. To create a new file, we click on the "New Document" button, then choose from a series of standard templates.
