The Law of Cosines

The Law of Sines (or Sine Rule) is very useful for solving triangles: $a \sin A = b \sin B = c \sin C$. It works for any triangle: a , b and c are sides. A , B and C are angles. (Side a faces angle A , side b faces angle B and. side c faces angle C).

The Law of Cosines has three sides and one angle, so that doesn't fit the problem. What we want is the Law of Sines. That's the ticket. Let's put our values in there: Now let's move some things around and get calculating: We're not done yet, though, we need to apply some inverse sine to both sides to get to B itself. $B = \sin^{-1}(0.860)$ $B = 59.4^\circ$
