### Limiting Reactants and Percent Yield

A limiting reagent is a chemical reactant that limits the amount of product that is formed. The limiting reagent gives the smallest yield of product calculated from the reagents (reactants) available. This smallest yield of product is called the theoretical yield. To find the limiting reagent and theoretical yield, carry out the following ...

### Limiting Reagent and Percent Yield Quiz Flashcards | Quizlet

Limiting Reagents and Percentage Yield "If one reactant is entirely used up before any of the other reactants, then that reactant limits the maximum yield of the product." Problems of this type are done in exactly the same way as the previous examples, except that a decision is made before the ratio comparison is done.

The key to recognizing which reactant is the limiting reagent is based on a mole-mass or mass-mass calculation: whichever reactant gives the lesser amount of product is the limiting reagent. What we need to do is determine an amount of one product (either moles or mass) assuming all of each reactant reacts.
