A marginal benefit is applied to those that double major in not only the wealth of academics one learns during classes, but also in one's flexibility to apply it when targeting jobs. ... From Logan Matthews, ... My criminology classes often asked us to argue for solutions to a specific problem, and I think looking for unique solutions to ...

Four Problems in Sexting Research and Their Solutions

In mathematics, a partial differential equation (PDE) is an equation which imposes relations between the various partial derivatives of a multivariable function.. The function is often thought of as an "unknown" to be solved for, similarly to how x is thought of as an unknown number to be solved for in an algebraic equation like $x^2 - 3x + 2 = 0$.However, it is usually impossible to write ...

Despite over 10 years of research, we still know very little about people's sexting behaviours and experiences. Our limited and, at times, conflicting knowledge about sexting is due to re-searchers' use of inconsistent conceptual definitions of sexting, dubious measurement practices, and atheoretical research designs. In this article, we provide an overview of the history of sex-ting ...

In mathematics, the Radon transform is the integral transform which takes a function f defined on the plane to a function Rf defined on the (two-dimensional) space of lines in the plane, whose value at a particular line is equal to the line integral of the function over that line. The transform was introduced in 1917 by Johann Radon, who also provided a formula for the inverse transform.
