Man, a Geomorphological Agent - An Introduction to ...

Man, A Geomorphological Agent: An Introduction to Anthropic Geomorphology (Book). Book Reviews 647 changes, coupled with the heavy demand for selected species, foreshadow precipitous declines in the numbers of such animals as the beaver. Cronon attaches considerable importance to the use of place names to demonstrate species populations (Beaver Brook, Beaver Pond).

Man Geomorphological Agent Introduction Anthropic ...

Abstract With the continuous development of man's ability to reshape nature, human activities have become the third geomorphologic agent in the modern geomorphological process.

Man, a geomorphological agent: An introduction to ...

Man is a geomorphological agent who was originally multizonal, but has progressively become azonal up to the present day. Unlike other agents, such as water, ice, wind and volcanoes, he is not limited or localized but, on the contrary, is less and less conditioned by environmental variables.

Man, a geomorphological agent : an introduction to ...

The most useful model suggested so far for quantification of potential anthropo-geomorphological impact is Nir's 'index of potential anthropic geomorphology' (I pag)-based 'the degree of development' and 'the degree of perception' concerning the rate of human impact and perception of the damage from anthropogenic processes, respectively. This anthropic geomorphological model can be regarded as a pioneer attempt; however, some details of the concept are debated and call for ...

Soil erosion is the displacement of the upper layer of soil; it is a form of soil degradation. This natural process is caused by the dynamic activity of erosive agents, that is, water, ice (glaciers), snow, air (wind), plants, animals, and humans. In accordance with these agents, erosion is sometimes divided into water erosion, glacial erosion, snow erosion, wind (aeolean) erosion, zoogenic erosion and anthropogenic erosion.
