Model Driven Architecture With Executable

Using the most widely adopted software modelling language, UML, the reader will learn how to build robust specifications based on OMG's Model Driven Architecture (MDA). From there, the authors describe the steps needed to move directly to executable code using Executable UML (xUML).

Model Driven Solutions

Based on Model Driven Architecture ® and the Executable UML new kind of software development is model driven. Model Driven Development takes advantages of model base thinking and produces more agile, highly robust, easy maintainable results. An introduction to Model Driven Architecture

As a foundation for Model-Driven Architecture, Executable UML provides the key technology for expressing application domains in a platform-independent manner. But Executable UML can do more than formalize requirements and use cases into a rich set of verifiable diagrams.

Executable UML: A Foundation for Model-Driven Architecture ...

Executable UML is one pillar supporting the Model-Driven Architecture (MDA) initiative announced by the Object Management Group (OMG) in early 2001, the purpose of which is to enable specification of systems using models. Model-driven architecture depends on the notion of a Platform-Independent Model (PIM), a model of a solution to a problem that does not rely on any implementation technologies.

Executable UML

An Executable Architecture (EA), in general, is the description of a system architecture (including software and/or otherwise) in a formal notation together with the tools (e.g. compilers/translators) that allow the automatic or semi-automatic generation of artifacts (e.g. capability gap analysis (CGA), models, software stubs, Military Scenario Definition Language (MSDL)) from that notation and which are used in the analysis, refinement, and/or the implementation of the architecture described.
