#### Modern Physical Chemistry Liptrot G

The metallic elements in the periodic table located between the transition metals and the chemically weak nonmetallic metalloids have received many names in the literature, such as post-transition metals, poor metals, other metals, p-block metals and chemically weak metals; none have been recommended by IUPAC.The most common name, post-transition metals, is generally used in this article.

#### Metals close to the border between metals and nonmetals ...

L'atomo (dal greco átomos: indivisibile) è la struttura nella quale la materia è organizzata in unità fondamentali che costituiscono gli elementi chimici.Questi si aggregano normalmente in unità stabili dette molecole che caratterizzano le sostanze chimiche.. Concepito come l'unità più piccola e indivisibile della materia secondo la dottrina atomistica dei filosofi greci Leucippo ...
