A monohybrid cross is a breeding experiment between P generation (parental generation) organisms that differ in a single given trait. The P generation organisms are homozygous for the given trait. However, each parent possesses different alleles for that particular trait. A Punnett square may be used to predict the possible genetic outcomes of a monohybrid cross based on probability.

Practice With Monohybrid Punnett Squares Answer Key ...

This is addressed very explicitly in my class early on in the year. As we begin the process of learning the method of Punnett Square models, I review the basics of the Monohybrid Cross Worksheet as a class. As I call on students and they correctly answer the prompt/problem, their card goes to the back of the deck.
