the opposite side. However, there is no rule on where to keep the variable. It all depends on your preference.

Solving Multi-Step Equations - ChiliMath

However, most linear equations require more than one step in order to find their solution. What steps then should be used, and in what order? For multi-step linear equations, we'll be using the same steps as we have previously; the only difference is that we won't be done after one step. We'll still have to do at least one more step.

Multi-step equations Multi-step equations are all equations that require you to perform more than two steps (or operations) in order to solve them. They can be simple or really hard to do, since there are no limitations on the number of steps you have to perform to get to a solution.

Solving Multi-Step Equations - Kuta Software LLC

The main difference between one-step equations and two-step equations is that one more step you need to do in order to solve a two-step equation. That additional step may be something like multiplying the variable by a certain number to get rid of a fraction in front of it. Otherwise, the rules are the same as before and these equations are just as easy to learn and solve as are the one-step ones

Multi Step Equations Steps Answer

The steps involved in solving multi-step equations with decimals are the same as those in equations with whole numbers. The complication may lie more in the multiplication and division of decimals rather than the steps.

Solving Multi-Step Linear Equations | Purplemath

To solve a multi-step equation, we would start by trying to simplify the equation by combining like terms and using the distributive property whenever possible. Consider the equation $2(x + 1) - x = 5$. First, we will use the distributive property to remove the parenthesis and then we can combine like terms and isolate the variable.
