Multiple-Organ Failure.  
Multiple-organ failure  
(MOF) is a severe, life-  
threatening condition  
that usually occurs as a  
result of major trauma,  
burns, or fulminant  
infections. Whatever  
the initiating event,

Multisystem organ failure generally results from infection, injury (accident or surgery) or reduced blood flow, as would occur during acute myocardial infarction or stroke, and these primary causes trigger an uncontrolled inflammatory response resulting in end-organ damage to vital organs, such as the heart, lungs, kidneys, bowel, brain and liver.

Organ system failure.

The systemic inflammatory response (which forms a part of the definition of sepsis) results in organ system dysfunction. The diagram below is merely a simplified way of looking at the pathogenesis of something this complex.
