Music and the brain: the neuroscience of music and musical ...

One of the first things that happens when music enters our brains is the triggering of pleasure centers that release dopamine, a neurotransmitter that makes you feel happy. This response is so quick, the brain can even anticipate the most pleasurable peaks in familiar music and prime itself with an early dopamine rush.

Music has powerful (and visible) effects on the brain ...

The music in the Mind, if attributed entirely to some special organisation of neurons in brain, will be a gross injustice to the very concept of human-knowledge; it will be similar to attributing cause of rain to cloud formation, the immediate cause behind the event.

This is your brain on music - CNN

The neuroscience of music is the scientific study of brain-based mechanisms involved in the cognitive processes underlying music. These behaviours include music listening, performing, composing, reading, writing, and ancillary activities. It also is increasingly concerned with the brain basis for musical aesthetics and musical emotion.

Music and the Brain: What Happens When You're Listening to ...

Through music we can learn much about our human origins and the human brain. Music is a potential method of therapy and a means of accessing and stimulating specific cerebral circuits. There is also an association between musical creativity and psychopathology. This paper provides a brief review.
