### By George Hague Definition of a Labor Unit: A benchmark ...

Costs in the Labor Cost column are the result of multiplying the manhours per unit by the rate of \$39.04 per hour. For example, if the Craft@H s column shows L2@.250, the Labor Cost column will show \$9.76. That's .250 manhours multiplied by \$39.04 per man-hour and rounded to the nearest penny.

### NECA Store - National Electrical Contractors Association

Divide the manhours per unit into 8 to find the number of units one electrician can install in one 8-hour day: 8 divided by .250 equals 32 units per day. Multiply that amount by the number of crew members to find the number of units the crew is likely to install in an 8-hour day.
