Solution Definition (Illustrated Mathematics Dictionary)

The first case is the case of infinite solutions, when all numbers are solutions. The next case is no solutions, when we have no answer. We can identify which case it is by looking at our results. If we end up with the same term on both sides of the equal sign, such as $4 = 4$ or $4x = 4x$, then we have infinite solutions.

One Solution, No Solution, Infinitely Many Solutions ...

You're going to have one solution if you can, by solving the equation, come up with something like x is equal to some number. Let's say x is equal to-- if I want to say the abstract-- x is equal to a . Or if we actually were to solve it, we'd get something like x equals 5 or 10 or negative pi-- whatever it might be. But if you could actually solve for a specific x , then you have one solution. So this is one solution, just like that.

One Solution In Math

An equation may have zero, one, or more solutions (this is also true for a system of equations). The equation $2 + x = 5$ has only solution, for example. x can only equal 3, so there is one solution.
