Foundations of Modern Astronomy Nicolaus Copernicus and the Heliocentric hypothesis Copernicus (1473–1547) was a Polish scholar who postulated an alternative description of the solar system.

Prentice Hall Earth Science Chapter 22: Origin ... - Study.com

Galileo has been called the "father of modern observational astronomy", the "father of modern physics", the "father of science", and "the father of modern science". Early civilizations, for example, Harappans, Mayans, and ancient Chinese used astronomy to keep track of time, orient their cities, and to try to predict the future. Early astronomy was a mix of careful observation of the positions and motions of the heavenly bodies, religion, and astrology.

Origin of Modern Astronomy - Chapter 21 Flashcards | Quizlet

Astronomy is the oldest of the natural sciences, dating back to antiquity, with its origins in the religious, mythological, cosmological, calendrical, and astrological beliefs and practices of prehistory: vestiges of these are still found in astrology, a discipline long interwoven with public and governmental astronomy.It was not completely separated in Europe (see astrology and astronomy) during the Copernican Revolution starting in 1543. In some cultures, astronomical data was used for ...

Astrophysics - Wikipedia

Historiography of science, in contrast, studies the methods employed by historians of science. The English word scientist is relatively recent, first coined by William Whewell in the 19th century. Before that, investigators of nature called themselves " natural philosophers ".

History of astronomy - Wikipedia

-Ushered in new astronomy-planets revolve around the sun-three laws of planetary motion 1) orbits of the planets are elliptical 2) Planets revolve around the Sun at varying speeds 3) There is a proportional relation between a planet's orbital period and its distance from the Sun (measured in AUs - one AU is about 150 million km or 93 million miles
