Oceanography. An "undertow" is a steady, offshore-directed compensation flow, which occurs below waves near the shore. Physically, nearshore, the wave-induced mass flux between wave crest and trough is onshore directed. This mass transport is localized in the upper part of the water column, i.e. above the wave troughs.To compensate for the amount of water being transported towards the shore, a ...

### Undertow (water waves) - Wikipedia

The core mobilizing myth of fascism which conditions its ideology, propaganda, style of politics and actions is the vision of the nation's imminent rebirth from decadence. [31] Griffin argues that the above definition can be condensed into one sentence: "Fascism is a political ideology whose mythic core in its various permutations is a ...
