A suspension is a 2-phase system consisting of a finely divided solid dispersed in a solid, liquid, or gas. Preparations contain finely divided drug particles (the suspensoid) distributed somewhat uniformly throughout a vehicle in which the drug exhibits a minimum degree of solubilitySuspension is a coarse dispersion in which insoluble solid particles of > 0.1µm are dispersed in a liquid medium.

After characterizing the emulsion type, the second most crucial information is the size of its drops. Since emulsification is generally a more or less random stirring process in which the breaking and coalescence steps are in dynamic equilibrium, the resulting emulsion is a polydispersed system in which small and big drops coexist.
