ZINC OXIDE HAZARD SUMMARY

Artists, printers, and film developers do not deal directly with light; rather, they must apply paints or dyes to a white sheet of paper. These paints and dyes must be capable of absorbing the appropriate components of white light in order to produce the desired affect. Most artists start with a white canvas and apply paints. These paints have ...

More than three quarters of global lead consumption is for the manufacture of lead-acid batteries for motor vehicles. Lead is, however, also used in many other products, for example pigments, paints, solder, stained glass, lead crystal glassware, ammunition, ceramic glazes, jewellery, toys and in some cosmetics and traditional medicines.

Water Based Paints: Complete Guide | Rawlins Paints

which is used in pigments, rubber, paints, ceramics, plastics, cosmetics and pharmaceuticals. Zinc Oxide fumes are fine, white, odorless particles which are formed when Zinc or Zinc alloys are heated to high temperatures (such as in welding, galvanizing and smelting). REASON FOR CITATION

* Zinc Oxide is on the Hazardous Substance List because it
