Pipe Drafting and Design | ScienceDirect

Pipe with square ends can be fabricated by wrapping a rectangular section of plate into a cylindrical form. This fact makes available a method (known as parallel forms) of developing pipe surfaces, and hence developing the lines of intersection between pipe walls. Based on this principle, you can make wraparound templates for marking all

elbows, boxes, ducting, hoppers, etc. are manufactured from thin sheet materials. Generally a template is produced from an orthographic drawing when small quantities are required (larger quantities may justify the use of press tools), and the template will include allowances for bending and seams, bearing in mind the thickness of material used.

Angled branch intersection | FabEasy Pipe Template Development

Draw a view of the pipes that shows the angle of intersection. Draw a circle under the vertical pipe and divide it into 16 equal spaces and number as shown. Extend vertical lines from the point where the lines drawn in #2 intersect the circle to the angle of cut. Obtain the circumference of the pipe by multiplying the diameter X 3.1415.
