Four districts furnished samples for a study in rock-weathering. Mineralogical data and fourteen new chemical analyses are presented in tables and diagrams. The granite gneiss of Morton, Minnesota, shows a marked loss of soda and lime in early stages of weathering but a more gradual loss of potash and baria.

### Weathering Rocks Worksheets & Teaching Resources | TpT

There are two kinds of weathering: mechanical and chemical. Mechanical weathering is the process by which rocks are broken down into smaller pieces by external conditions, such as the freezing of water in cracks in the rock. The rock is chemically weathered when it reacts with rain, water, and the atmosphere to destroy chemical and mineralogical bonds and form new minerals.
