For over one hundred years, social psychology has studied groups to identify, analyze and understand the dynamics that govern group behavior. Many different schools of thought have arisen from these research efforts. In the book Small Groups as Complex Systems, Holly Arrow describes thirteen differing approaches to the study of small groups.

A complex system is a system composed of many components which may interact with each other. Examples of complex systems are Earth's global climate, organisms, the human brain, infrastructure such as power grid, transportation or communication systems, social and economic organizations (like cities), an ecosystem, a living cell, and ultimately the entire universe.
