Acid catalysis. In acid catalysis and base catalysis a chemical reaction is catalyzed by an acid or a base. The acid is the proton donor and the base is the proton acceptor, known as Brønsted-Lowry acid and base respectively. Typical reactions catalyzed by proton transfer are esterifications and aldol reactions.

This is similar to the case of solid acid catalysts; it took about 20 years that many solid acid-catalyzed processes explosively appeared in 1970s since the fundamental studies of solid acid catalysts started in about 1950. In both cases, the fundamental studies are important for realization of industrial catalytic processes.
