A useful procedure in network analysis is to simplify the network by reducing the number of components. This can be done by replacing physical components with other notional components that have the same effect. A particular technique might directly reduce the number of components, for instance by combining impedances in series.

Pretty old now, but the Van Valkenburg is a classic. This 1974 3rd edition on Network analysis (no, that's not computer network analysis!) is similar in outlook to the approach back in the days of the 1955 original, i.e. great mathematical depth and very little breadth, and that probably is not what most readers want now.
