Train Problems - Sample Math Practice Problems

The trick with word problems is to pick them apart to see what you know, then build equations that you can solve. It takes some practice. In this problem, we know that one train starts two hours before the other one and travels at a known rate. Let's calculate how far it goes in those two hours:
 $d = rt = 2 \text{ hrs} * 60 \text{ mi/hr} = 120 \text{ mi}$
