The circle on the left has equation  $(x + 3)^2 + y^2 = 25$ ; the circle on the right has the equation  $(x - 3)^2 + y^2 = 25$ . This can be confirmed by checking to see that particular points on each circle satisfy the equations. For example,  $(-3, 5)$  satisfies the first equation and  $(3, 5)$  satisfies the second equation.

So, the trick to calculate you height from a tall building, like our math classroom on the third floor, can be done simply holding a ball at eye level, setting your i-phone timer, dropping the ball and stopping your timer when the ball hits the ground. Of course, if someone helps you with this, everything becomes much easier.

Super Shapes Age 7 to 11 Short Challenge Level: The value of the circle changes in each of the following problems. Can you discover its value in each problem?

### Connected Math Project 2 - Grade 8

The Greedy Triangle An offbeat introduction to geometry. When a triangle tires of having only three sides, he asks the shapeshifter to change him first into a quadrilateral, then a pentagon, a hexagon, and so forth until he realizes he is happiest as a triangle: he can hold up a roof, be a slice of a pie and, best of all, slip into place when people put their hands on their hips.

### Math Investigation - 3D Shapes Robot

The ideas on the card and the Extensions above provide plenty of material for a whole class investigation. You will need one set of Shape Algebra pieces for each pair. The investigation could be with all the students at once, or as a work station in an algebra unit that included three to five algebra investigations.
