To understand this, we need to examine the nature of drug addiction. It is a disease of the brain. The RUSH! When a person takes the substance of their choice, there is a reaction in the brain. That is really what begins drug addiction behavior. Most of the time it is a release of dopamine, which is the chemical that gives us reward.

Understanding Drugs and Behaviour | Wiley

When scientists began to study addictive behavior in the 1930s, people addicted to drugs were thought to be morally flawed and lacking in willpower. Those views shaped society's responses to drug use, treating it as a moral failing rather than a health problem, which led to an emphasis on punishment rather than prevention and treatment.

Although taking drugs at any age can lead to addiction, the earlier that drug use begins, the more likely it will progress to addiction. This is particularly problematic for teens. Because areas in their brains that control decision-making, judgment, and self-control are still developing, teens may be especially prone to risky behaviors, including trying drugs.
