What you should know Diabetic ketoacidosis (DKA) is an extreme metabolic state caused by insulin deficiency. The breakdown of fatty acids (lipolysis) produces ketone bodies (ketogenesis), which are acidic. Acidosis occurs when ketone levels exceed the body's buffering capacity (figure ↓).^{1 2} Diabetic ketoacidosis may follow absolute insulin deficiency or relative insulin deficiency.

Information About Allogene Therapeutics

All medical practice should be governed by basic ethical principles, and intensive care medicine is no exception. Indeed, because of the nature of intensive care ethical issues are addressed almost daily. #### Ethical principles of medical care Withdrawal of treatment is an issue in intensive care medicine because it is now possible to maintain life for long periods without any hope of recovery.
