Introduction: the genetic manipulation referred to in this article is “not” about crossing different breeds of sheep, developing various hybrids of corn, or other “within species” enhancement to improve naturally-occurring traits. Instead it’s about using a bacteria or virus to artificially insert an entirely foreign DNA into a plant’s genes, such as human genes inserted...

GMO Risks | GMO Awareness

Monsanto invented the herbicide glyphosate and brought it to market under the trade name Roundup in 1974, after DDT was banned. But it wasn’t until the late 1990s that the use of Roundup surged, thanks to Monsanto’s ingenious marketing strategy. The strategy? Genetically engineer seeds to grow food crops that could tolerate high doses of Roundup.

15 Health Problems Linked to Monsanto's Roundup - EcoWatch

Glyphosate. Perhaps the most well-known and widely used herbicide in the US — also known as Monsanto-Bayer’s RoundUp — glyphosate has made recent news for being the subject of more than 10,000 cancer lawsuits. It’s often used in commercial agriculture and has a deep link with GMO food production, but it’s also available for home use.

Pesticides in Food: What You Should Know and Why it Matters

by Jennifer Hsiao figures by Krissy Lyon Summary: Pesticides are ubiquitous. Because they are used in agriculture and food production, pesticides are present at low levels in many of our diets. Less obvious is the fact that many people use pesticides around their homes, and even on their skin (i.e. in the form of insect repellents). According to the NIH, the health effects of pesticides ...

The chemical in Roundup that kills plants is called glyphosate. Glyphosate works by inhibiting the plant enzyme that helps make some of the amino acids (protein building blocks) that the plant needs to survive [3]. Roundup Ready crops contain a different version of this enzyme that is not blocked by glyphosate.
